Advancing management course for conservancies

Target Groups

Management training for sustainable conservancies

Anti-Poaching

Business Plan
Development

Fundraising

Conflict management

Community Relations

Expected benefits

- Quality leadership and management
- Improved transfer of skills and knowledge to local conservancy leaders.
- Enhanced benefits and profits
- Conservancy sustainability
- Improved application of best management practices
- Fostering good partnerships, government relations, community and stakeholder engagement
- Enhanced linkages and networking
- Effective business plans integrating wildlife, livestock, tourism and other enterprises

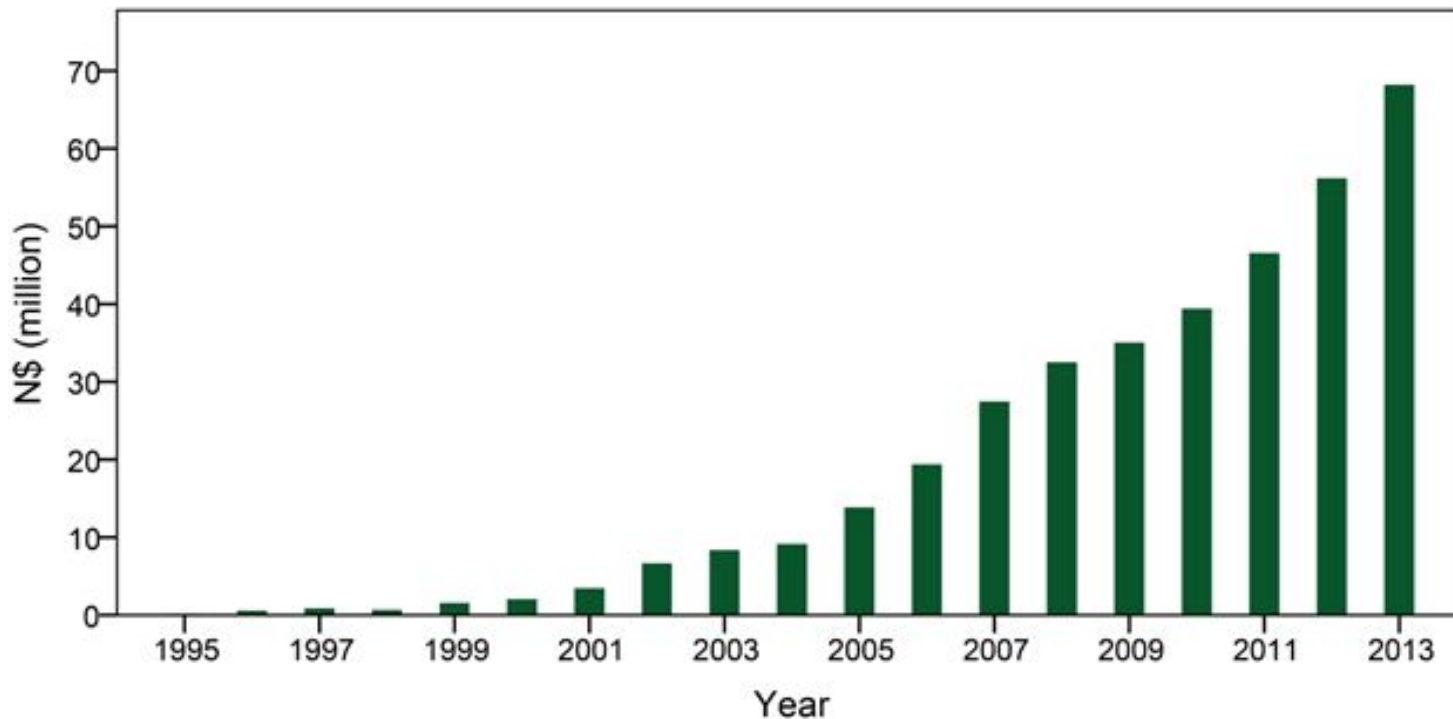

Funding model of the program

Budget allocation for most conservancies is less than KES 300,000 per year (the wish of conservancies is to train 6 managers and 7 board members, Cost per person would likely be below KES 100,000)

Performance of Conservancies in Botswana

FACT!

The significance of conservancies has transformed from a concern for conservation of endangered species and landscapes into a comprehensive set of conservation, social and economic development goals (Liang et al 2018).

Community conservancies are powerful extensions of the Protected Area system, with great potential to support biodiversity conservation, poverty eradication and conflict mitigation.

The Training Program targets to maximize the potential of conservancy managers and policymakers in their management and enhance their ability to mitigate the threats and stresses that they face.

Grassy Waters
